Abstract of the Disclosure

The invention provides a new and useful process for emergency roof repair to a home damaged by weather or strife. The invention includes plastic sheeting, roofing nails, claw hammer, bungie ties, utility knife, safety goggles, work gloves, and tool belts. The components function together pursuant to the prescribed process to effect repair. Sheeting is rolled on a sturdy cardboard core which permits the user to pull the proper length of sheeting from the roof-mounted box. The sheeting is secured to the damaged area with the plastic capped roofing nails or elasticized bungie ties on the anchoring bands of the sheeting.
